Apps Used = (Jmeter-BlazeMeter)

Milestone Description

Overview: This milestone focuses on performance testing using JMeter, simulating user interactions and analyzing the scalability of web applications under different load conditions.

1. Performance Test Scripts:

- Create performance test scripts using JMeter.

- Simulate user interactions and define load scenarios.

 2. Performance Metrics Report:

- Analyze and interpret the results using JMeter to make recommendations for improvement.

3. Final Report:

- Compile a final project report summarizing findings, including manual test results, API test results, and performance test results.
